## PROFESSIONAL SUMMARY

Senior Full-Stack & AI/LLM Software Engineer with 5+ years architecting production MERN and Python applications, and hands-on experience building LLM-integrated products — including RAG pipelines (LangChain, Qdrant vector DB) for document intelligence and LangChain agent-based workflows for real-time event processing. Delivered a compliance-verification engine that automated 90% of manual document review and a document intelligence platform that cut processing time by 70%. A system-level performance overhaul reduced core API latency by 40%, earning the company's Performance of the Year award (2023). Proven across fintech compliance systems, data quality frameworks, and computer vision pipelines (YOLO, Roboflow), with working knowledge of AWS (EC2, S3, SQS, Textract) and Kafka. Available immediately for Senior MERN, Full-Stack AI/LLM, or Node.js Lead roles, open to relocation or fully remote.

## TECHNICAL SKILLS

**AI / LLM Engineering:** LLM API Integration (Claude API), RAG Pipelines, LangChain, LangChain Agents, Vector Databases (Qdrant), Prompt Engineering, Document Intelligence & OCR

**Computer Vision:** YOLO, Roboflow — model training & deployment for visual element detection

**AI-Augmented Development Tooling:** Cursor, GitHub Copilot — used to accelerate team delivery velocity

**Frontend:** React.js, Redux, TypeScript, HTML5, CSS3, Tailwind, D3.js, Jest/testing, WebSockets, Unit Testing

**Backend:** Python, Node.js, Express, GraphQL, Kafka, Socket.IO, JWT, OAuth, REST API, System Design, Redis, Next.js

**Database:** MongoDB, PostgreSQL, Qdrant, Sequelize, Mongoose

**Cloud & DevOps:** AWS (EC2, S3, SQS, Textract), Docker, CI/CD, PM2, Git, Microservices, Agile/Scrum

## PROFESSIONAL EXPERIENCE

### Technical Consultant & AI/LLM Engineer

*Independent Technical Consultant | April 2026 – Present*

- Providing specialized technical consulting on AI-driven automation for fintech and professional-services clients following a focused R&D phase in LLM-integrated systems.

***Client: BG & Associates (Chartered Accountants) | April 2026 – Present***

- Built an LLM-integrated compliance-verification engine for a Chartered Accountancy client, replacing a fully manual document review process with automated rule-based and LLM-assisted discrepancy detection.
- Impact: Automated **90%** of previously manual compliance-review work while maintaining **90%+ accuracy** in discrepancy detection, cutting review turnaround time and operational overhead.

### Senior Software Engineer

*Blucursor Infotech Pvt. Ltd, Indore, India | Feb 2021 – Mar 2026*

*A product-focused IT firm delivering fintech, compliance, and AI automation platforms for US-based enterprise clients.*

Role scope: Led full-stack architecture, engineering governance, and delivery across 4 concurrent product streams owning technical design, sprint planning, code reviews, and cloud infrastructure on AWS.

**Leadership & architecture:**

- Architected a Node.js, Python and MongoDB Workflow Automation Engine processing thousands of concurrent automated actions at 99.9% uptime, with a 40% reduction in core API latency — the performance work recognized with the company's Performance of the Year award (2023).
- Led ISO 27001 technical compliance audit end-to-end — achieved certification in the first attempt with 100% backend encryption coverage, zero non-conformities raised during external audit.
- Mentored a team of 16–18 developers on architecture standards, Agile practices, and code quality (SonarQube, ESLint); supported onboarding and professional growth.
- Designed microservices and RESTful/GraphQL API layers integrated with third-party services (Twilio, SendGrid, DocuSign, PandaDoc) via secure webhooks.

**Delivery & impact:**

- Built a RAG pipeline with LangChain and a Qdrant vector database to ground LLM-generated document summaries in source content, reducing manual document processing time by 70% (AWS Textract, Roboflow).
- Designed a LangChain agent-based workflow with vector-embedded event storage for the manufacturing surveillance platform, enabling contextual retrieval and reasoning over detected events at scale.
- Improved fintech client operational efficiency by 30% through a centralised Data Quality & Reconciliation framework with real-time dashboards (Chart.js, D3.js, ApexCharts).
- Enhanced business process efficiency by 40% for US-based compliance clients through custom multi-tenant portals with e-signature workflows.
- Adopted AI-augmented development tooling (Cursor, GitHub Copilot, Claude API) across the team, cutting time-to-market by 50% on the v2.0 Flow Builder.

**Assistant Professor (Computer Science)**

*Sagar Institute of Research & Technology, Bhopal | Jan 2014 – Oct 2020*

- Delivered undergraduate coursework in Data Structures, Algorithms, Database Systems, and Web Technologies — building the theoretical and systems foundations later applied in production engineering.
- Supervised final-year student projects in software development and data management, mentoring 10+ teams through requirement analysis, system design, and deployment.

## KEY PROJECTS

***Project I · AI/LLM Compliance Automation Platform — BG & Associates (April 2026 – Present)***

*Node.js · Python · MongoDB · LLM (Claude API) · Prompt Engineering · AWS*

- Replaced a fully manual document compliance-verification process for a Chartered Accountancy client with an LLM-assisted automation system that checks documents against applicable compliance rules.
- Designed a hybrid rules-and-LLM verification engine covering the client's core compliance checks, using structured prompting to flag discrepancies for accountant review instead of manual line-by-line auditing.
- Impact: Automated 90% of manual compliance-review effort · 90%+ accuracy in discrepancy detection · Reduced review turnaround time and operational overhead.

***Project II · Manufacturing Surveillance & Monitoring Engine (April 2024 – Mar 2026)***

*Node.js · Python · MongoDB · Kafka · Socket.IO · React.js · LangChain · LangChain Agents · Vector DB · Computer Vision*

- Architected a distributed AI-powered surveillance engine ingesting live multi-camera video streams and processing frames through a fine-tuned computer vision model to detect operationally critical events in real time.
- Built a LangChain agent-based pipeline with vector-embedded event storage for contextual retrieval and reasoning over past events, connected to multi-channel alerting (Twilio SMS, SendGrid email) via Kafka-backed event streaming at scale.
- Impact: Scaled to thousands of concurrent automated actions · 99.9% uptime SLA · Core API latency reduced by 40% · Time-to-market cut by 50% via AI-augmented development.

***Project III · Document Validation & Summarization Platform (May 2022 – March 2024)***

*Node.js · Python · React.js · MongoDB · LangChain · Qdrant · RAG · AWS Textract · Roboflow · Express*

- Architected an end-to-end AI document intelligence platform in Python automating extraction and summarization from PDF-based application files, replacing a fully manual review workflow.
- Built a RAG pipeline using LangChain and a Qdrant vector database to retrieve relevant document context and ground LLM-generated summaries, improving extraction accuracy and reducing hallucinated output.
- Trained and deployed computer vision models via Roboflow for visual element detection (signatures, stamps, form fields), with a React.js validation UI reducing human touchpoints by 70%. Impact: Near-zero error rate on structured field extraction.

***Project IV · Fintech Data Quality & Reconciliation Framework (Feb 2021 – April 2022)***

*Node.js · Python · React.js · Sequelize · PostgreSQL · Chart.js · D3.js · ApexCharts*

- Designed a centralised data quality and reconciliation engine for enterprise fintech clients, with a five-library analytics dashboard suite (Chart.js, ApexCharts, Plotly, Highcharts, D3.js) for real-time data health visibility.
- Engineered backend APIs with Sequelize ORM and automated anomaly flagging, lineage tracking, and threshold-based alerting. Impact: 30% operational efficiency gain · 25% reduction in integration errors.

## EDUCATION

Master of Technology | Software Engineering | RGPV Bhopal | June 2013

Bachelor of Engineering | Computer Science & Engineering | RGPV Bhopal | June 2008
